About Us
aiConnected develops Artificial Intelligence platforms and solutions for small businesses and enterprise clients.

"Build a good name. Keep your name clean. Don't make compromises, don't worry about making a bunch of money or being successful — be concerned with doing good work and make the right choices and protect your work. And if you build a good name, eventually, that name will be its own currency."

– William S. Burroughs

This document reflects the billing architecture as designed during initial platform planning. Specific rates, thresholds, and tier structures are subject to revision prior to public launch.

Overview

The aiConnected Business Platform operates on a zero-barrier, performance-aligned revenue model. Agencies access the platform at no cost and retain full pricing authority over their clients. aiConnected earns through a platform tax on all revenue flowing through the system, API resale margin, and optional flat-rate customer success services. This model ensures that aiConnected only profits when agencies profit — creating a fully aligned incentive structure across the entire ecosystem.

The Three-Party Model

Every transaction on the platform involves three parties:

- **aiConnected** — Platform provider, infrastructure operator, billing processor
- **Agency** — White-label operator, client-facing service provider, pricing authority
- **Business Client** — End user of agency-delivered services

All client billing flows through aiConnected's Stripe infrastructure. This is not optional — it is the mechanism by which the platform tax is collected automatically, module activation is verified, and the ecosystem remains solvent.

Platform Access

Agencies pay nothing to access the platform.
There are no annual fees, no seat fees, and no setup costs for agency access. The platform is free to join, free to configure, and free to use until revenue is generated. This removes all friction from agency adoption and positions aiConnected as a true growth partner rather than a cost center.

PLATFORM TAX (REVENUE SHARE)

The Core Principle

aiConnected charges **10% of whatever the agency charges their clients**, collected automatically at the point of transaction. This applies to all billable services flowing through the platform — subscriptions, packages, usage-based charges, and API credits sold to clients.

Because all billing runs through aiConnected's Stripe infrastructure, this collection is automatic and requires no self-reporting from agencies.

How It Works in Practice

- Agency charges a client $500/month → aiConnected receives $50
- Agency charges a client $5,000/month → aiConnected receives $500
- Agency charges a client $50,000/month → aiConnected receives $5,000

The platform tax scales with the agency's success. If an agency is not generating revenue, aiConnected earns nothing from that agency — and accepts that as the cost of the partnership model.

Minimum Floor Pricing

Every service and feature on the platform carries a minimum floor price set by aiConnected. Agencies may not charge their clients below this floor. Floors are set conservatively and are not intended to be restrictive — they exist solely to ensure platform sustainability and prevent race-to-zero pricing scenarios.

Agencies retain complete freedom to price above the floor at any multiple they choose. An agency may charge $100/month, $1,000/month, or $10,000/month for the same service — aiConnected takes 10% regardless.

Module Activation & Client Access

Platform modules require activation. A business client's access to any given module is contingent on their billing being active and current within the platform.

Standard Activation

The business client pays the agency directly through the platform. As long as that payment processes each billing cycle, the client's modules remain active. If payment lapses, access is suspended automatically.

Agency-paid activation:

An agency may choose to absorb the cost of a service and offer it to their clients at no charge. In this case:

- The agency pays aiConnected's minimum floor rate for that service directly
- The platform tax is assessed against the **declared retail value** of the service, not the client-facing price of $0
- aiConnected sets the declared retail value for all agency-paid services

This structure prevents a known abuse vector: agencies cannot use the agency-paid feature to quietly charge their clients off-platform and circumvent the platform tax. The tax basis is the declared value, not the invoice.

Abuse Prevention

The agency-paid feature is monitored for misuse. Any agency with more than 20% of their active client base on agency-paid plans will be flagged for review. Agencies found to be using the feature to route billing off-platform in violation of platform terms will have their access suspended pending resolution.

API Resale Model

How API Costs Flow

aiConnected sources AI inference through **OpenRouter** as its primary unified API layer. OpenRouter provides access to all major model providers — Anthropic, OpenAI, Google, Mistral, Meta, and others — through a single integration. This eliminates the operational complexity of maintaining direct relationships with multiple providers during the platform's early growth phase.

As platform volume grows, direct API relationships with high-volume model providers (beginning with Anthropic) will be established to access committed-use pricing. OpenRouter will continue to serve all other model traffic.

Pricing Structure

aiConnected charges a 10% markup on all API costs sourced through the platform. This is the minimum cost floor for API usage. The platform tax (10% of agency charges) applies on top of this. These are two separate, additive charges:

Layer	Who Pays	Amount
API cost	aiConnected pays provider	Actual cost
aiConnected markup	Agency pays aiConnected	Cost × 10%
Agency markup	Client pays agency	Agency's discretion
Platform tax	aiConnected deducts from agency revenue	10% of client charge

Example:

- OpenRouter charges aiConnected $10 for a batch of Claude Sonnet calls
- aiConnected charges the agency $11 (10% markup)
- Agency charges their client $30 for those same calls
- aiConnected collects 10% of $30 = $3 platform tax
- **Total aiConnected revenue on this transaction: $4 ($1 markup + $3 tax)**

Model Flexibility

Agencies may select whichever AI models best serve their use case. The pricing structure is model-agnostic — the 10% markup and 10% platform tax apply uniformly regardless of whether the agency uses premium models (Claude Sonnet, GPT-4o) or economy models (Grok, Haiku). This ensures aiConnected earns proportionally from all inference activity without needing to manage per-model pricing policies.

API Credit Bundles

Agencies pre-purchase API credits through the platform at aiConnected's marked-up rates. Usage deducts from the agency's credit balance in real time. When a balance reaches zero, usage is suspended until the agency tops up. aiConnected does not extend API credit — all usage is prepaid.

This protects aiConnected from exposure to uncollectable API debt and ensures agencies manage their usage responsibly.

Bring Your Own Key (BYOK)

Agencies with existing direct API relationships may connect their own API keys to the platform. When BYOK is active for an agency:

- Their API calls route through their own keys, not aiConnected's infrastructure
- aiConnected does **not** apply the 10% API markup (there is no API cost to mark up)
- The **platform tax still applies** — 10% of whatever the agency charges their clients for AI usage

BYOK does not exempt an agency from the platform tax. The platform tax is a fee for the value of the platform infrastructure, billing system, module layer, and white-label capability — not a fee for API access specifically. This is explicit in platform terms of service and must be acknowledged at onboarding.

BYOK may be negotiated differently for enterprise-tier agencies at aiConnected's discretion on a case-by-case basis.

Agency Billing Configuration

Agencies have full control over their client-facing billing setup through aiConnected's native Stripe workflow. The following are configurable per agency:

- **Products and services** — Create any product or service offering with a custom name, description, and price
- **Packages** — Bundle multiple platform capabilities into tiered offerings at custom price points
- **Feature access** — Control which platform modules are available within each package or to each client
- **API credit pricing** — Set the price at which API credits are sold to clients (above the minimum floor)
- **Upsells** — Create add-on products that clients can self-activate or that agencies can offer during outreach
- **Free services** — Designate any service as agency-paid (see Module Activation above)

The only constraint is the minimum floor price per service. Everything else is at the agency's discretion.

Customer Success Services (Flat Rate)

Overview

aiConnected offers white-label customer success services to agencies. Under this model, aiConnected provides dedicated human success managers who engage with the agency's business clients on the agency's behalf — conducting monthly check-ins, providing platform coaching, introducing new features, and ensuring clients are extracting maximum value from their tools.

This service is the single flat-rate offering in the aiConnected model. It is optional, priced separately, and does not affect the platform tax structure.

Why This Exists

Client churn is the primary destroyer of recurring revenue in the agency model. A client who doesn't understand how to use the platform, doesn't see results, or feels unsupported will cancel. A dedicated success manager who calls every client once a month eliminates most of the

conditions that lead to churn. Agencies that invest in CS retain more clients, grow their base faster, and generate more revenue — which in turn generates more platform tax revenue for aiConnected. The incentive is fully aligned.

Service Tiers

Part-Time Tier

- Up to 80 active business clients
- 20 hours of success manager time per week (80 hours/month)
- One dedicated check-in per client per month
- Price: **$1,500 – $1,700/month**

Full-Time Tier

- Up to 160 active business clients
- 40 hours of success manager time per week (160 hours/month)
- One dedicated check-in per client per month
- Price: **$3,000 – $3,500/month**

Starter Tier *(for early-stage agencies)*

- Up to 30 active business clients
- Price: **$600 – $800/month**

Scaling

When an agency's client base exceeds the capacity of their current CS tier, an additional full-time add-on is required. Each full-time add-on covers an incremental 160 clients at the full-time tier rate.

What Clients Receive

Each business client receives a minimum of one scheduled monthly appointment with their assigned success manager. During this session the success manager:

- Reviews how the client is currently using the platform
- Identifies underutilized features and provides coaching
- Introduces any new capabilities or products relevant to the client's business
- Documents feedback and escalates any support issues
- Reinforces the agency's brand and relationship with the client

From the client's perspective, they are interacting with the agency — not aiConnected. All CS activity is fully white-labeled.

Revenue Summary

Revenue Stream	Type	Rate
Platform tax on client billing	Variable	10% of agency charges
API resale markup	Variable	10% of API cost
Platform tax on BYOK API usage	Variable	10% of agency charges
Customer Success — Starter	Flat monthly	$600–$800/month
Customer Success — Part-Time	Flat monthly	$1,500–$1,700/month
Customer Success — Full-Time	Flat monthly	$3,000–$3,500/month
CS overage (per 160 clients)	Flat monthly	Full-time tier rate
